Report on lab technician training program

A one day Short Term Training Program on “*Lab technician training programme*” was organized by YONTUS life sciences at seminar hall **28/08/2019** conducted by Narayana Pharmacy College , Nellore. 10 non-teaching staffs are actively participated in the interactive session. The program was intended to develop the skill for the preparation of laboratory manual for technical institutes. On the day, instructor explained the role of laboratory manual and instructors in technical institutes. Development of laboratory manual was exercised on the second way with practice sessions. Instructor focused on various types of hazards coming across the labs. In addition, safe operating procedure for lab activities were explained. At the end, preparation of lab manual, its usage, and assessment of students based on several criteria were explained.

6	Type of Activity/ Event	Seminar

The Internal Quality Assurance Cell (IQAC) of Narayana Pharmacy College, Nellore organized seminar on “Optimization and Integration of Modern Methods of Teaching & Learning” on July 20th, 2019, the session was handled by a renowned academician D.Sandeep, Associate Professor as resource person, during the session he explained the importance of the modern methods of teaching and learning.

Higher education is a dynamic, continually evolving concept that keeps adapting to the most up-to-date changes, likewise, the methodology used in teaching and research is equally momentary in nature and demands-up-to-date approaches as well. Educationists need to absorb the fundamental nature of the evolutionary character of higher education in academic curriculum, empowering students and scholars to create an up to dated learning process that is pragmatic, effective and methodically impactful. The watchful and deliberate efforts by policy-makers and academicians have put in place a set of practices within the high educational institutions that provide the most engaging opportunities for the students to acquire competencies and skills. This enables them to be fully equipped for the challenges now emerging in global society. In this age of information surplus era, it is important for the higher educational institutions in general and teachers in particular to drop down and share information that has relevance in terms of budding specific employable skills. When the educationalists and organizational leaders in our country’s higher education, firmly and

ardently dedicated themselves to implement certain guidelines for themselves and for the students in their realms of responsibility, the young students cultivated in an environment, where they are proficient enough to develop holistic capacities.

The dependence on the already popular teaching aid technology will soon become an indispensable tool that will offer more flexibility to the students and teachers. The traditional classroom set-up is being replaced by very fast by methods such as Resource, Sharing, interactive teaching, Personalized learning and Timeliness assessing, which encourage greater participation and interaction between the students and the teachers. With such a set-up in the offing, education will never remain confined to more information but will be an experience that touches lives forever. This way, it may be able to certainly connect the society with directional quality education in India.

In order to redefine quality education, technical education needs to blend high value deliveries with optimization and integration of modern methods of teaching and learning tools to ensure that each institution has a safe, healthy, energizing, intellectually challenging, and joyful learning environment. The pedagogical fraternity needs to be committed to engage students in active, collaborative and technology based learning methodologies to develop formative and summative assessments of student progress and learning. Educationalists, it is our mission to facilitate the development of global citizens-individuals with self-confidence, who are able to contribute to community life, to build tolerance and to be accountable. A regular introspection to our teaching/research methodology and curriculum can go a long way in making our learning process more relevant and dynamic in the wake of changing times. Educators at all levels need, personally and professionally, to take on the vital task of equipping students and scholars to face every challenge and use every opportunity as they become effective and productive global citizens and leaders of tomorrow. Hence, modern methods of teaching and learning have become the need of the hours.

Brief Discussion on Research Paper Writing

The goal of research paper writing was explained by Dr. T.V.V Satyanarayana and he focused simply presenting facts and ideas. It is to reach out to the reader to successfully explain your findings and assist readers in comprehending the topics at hand. Although manuscript writing has a strict format, there is still room to weave a captivating story that communicates the science while still being enjoyable. Scientists, authors, and editors discuss the value and significance of creativity and how to create a great study.

The main five major parts of research paper is introduction, review of literature, methods, results and discussion, conclusion.

He was explained different steps in the research paper writing

Understand the assignment

For some of you this goes without saying, but you might be surprised at how many students start a research paper without even reading the assignment guidelines. So your first step should be to review the assignment and carefully read the writing prompt. Specifically, look for technical requirements such as length, formatting requirements (single- vs. double-spacing, indentations, etc.) and citation style. Also pay attention to the particulars, such as whether or not you need to write an abstract or include a cover page.

Choose your topic

In open-ended assignments, the student must choose their own topic. While it may seem simple enough, choosing a topic is actually the most important decision you'll make in writing a research paper.

Gather preliminary research

PRINCIPAL

NARAYANA PHARMACY COLLEGE
NELLORE - 524 002.

NARAYANA PHARMACY COLLEGE

(Approved by PCI & AICTE, New Delhi) (Affiliated to JNTUA Ananthapuramu)

Phone & Fax No :0861-2317966; Cell No :+91-9100051603
Email: principal.npc@narayanagroup.com Visit us:www.narayanapharmacycollege.com

To refine your topic and prepare your thesis statement, find out what research is available for your topic as soon as possible. Early research can help dispel any misconceptions you have about the topic and reveal the best paths and approaches to find more material.

Write a thesis statement

A thesis statement is the best answer for how to start a research paper. Aside from preparing your reader, the thesis statement also makes it easier for other researchers to assess whether or not your paper is useful to them for their own research. Likewise, you should read the thesis statements of other research papers to decide how useful for every researcher.

Determine supporting evidence

Normally, researcher find your supporting evidence by reading each source and taking notes. Isolate only the information that's directly relevant to your topic; however interesting they may be. And always write down page numbers, not only for you to find the information later, but also because you'll need them for your citations.

Write a research paper outline

A lot of students want to know how to write a research paper outline. More than informal essays, research papers require a methodical and systematic structure to make sure all issues are addressed, and that makes outlines especially important.

Write the first draft

Once your outline is finished, it's time to start actually writing your research paper. This is by far the longest and most involved step, but if you've properly prepared your sources and written a thorough outline, everything should run smoothly.

Cite your sources correctly

Email: principal.npc@narayanagroup.com Visit us:www.narayanapharmacycollege.com

Citations are part of what sets research papers apart from more casual nonfiction like personal essays. Citing your sources both validates your data and also links your research paper to the greater scientific community.

Edit and proof read

Last but not least, you want to go through your research paper to correct all the mistakes by proofreading. We recommend going over it twice: once for structural issues such as adding/deleting parts or rearranging paragraphs and once for word choice, grammatical, and spelling mistakes. Doing two different editing sessions helps you focus on one area at a time instead of doing them both at once.
